What is Bellbot?

Travellers usually visit a hotel's web page when they are planning a journey, comparing, researching and forming criteria to decide which of the options available is best suited to their needs.

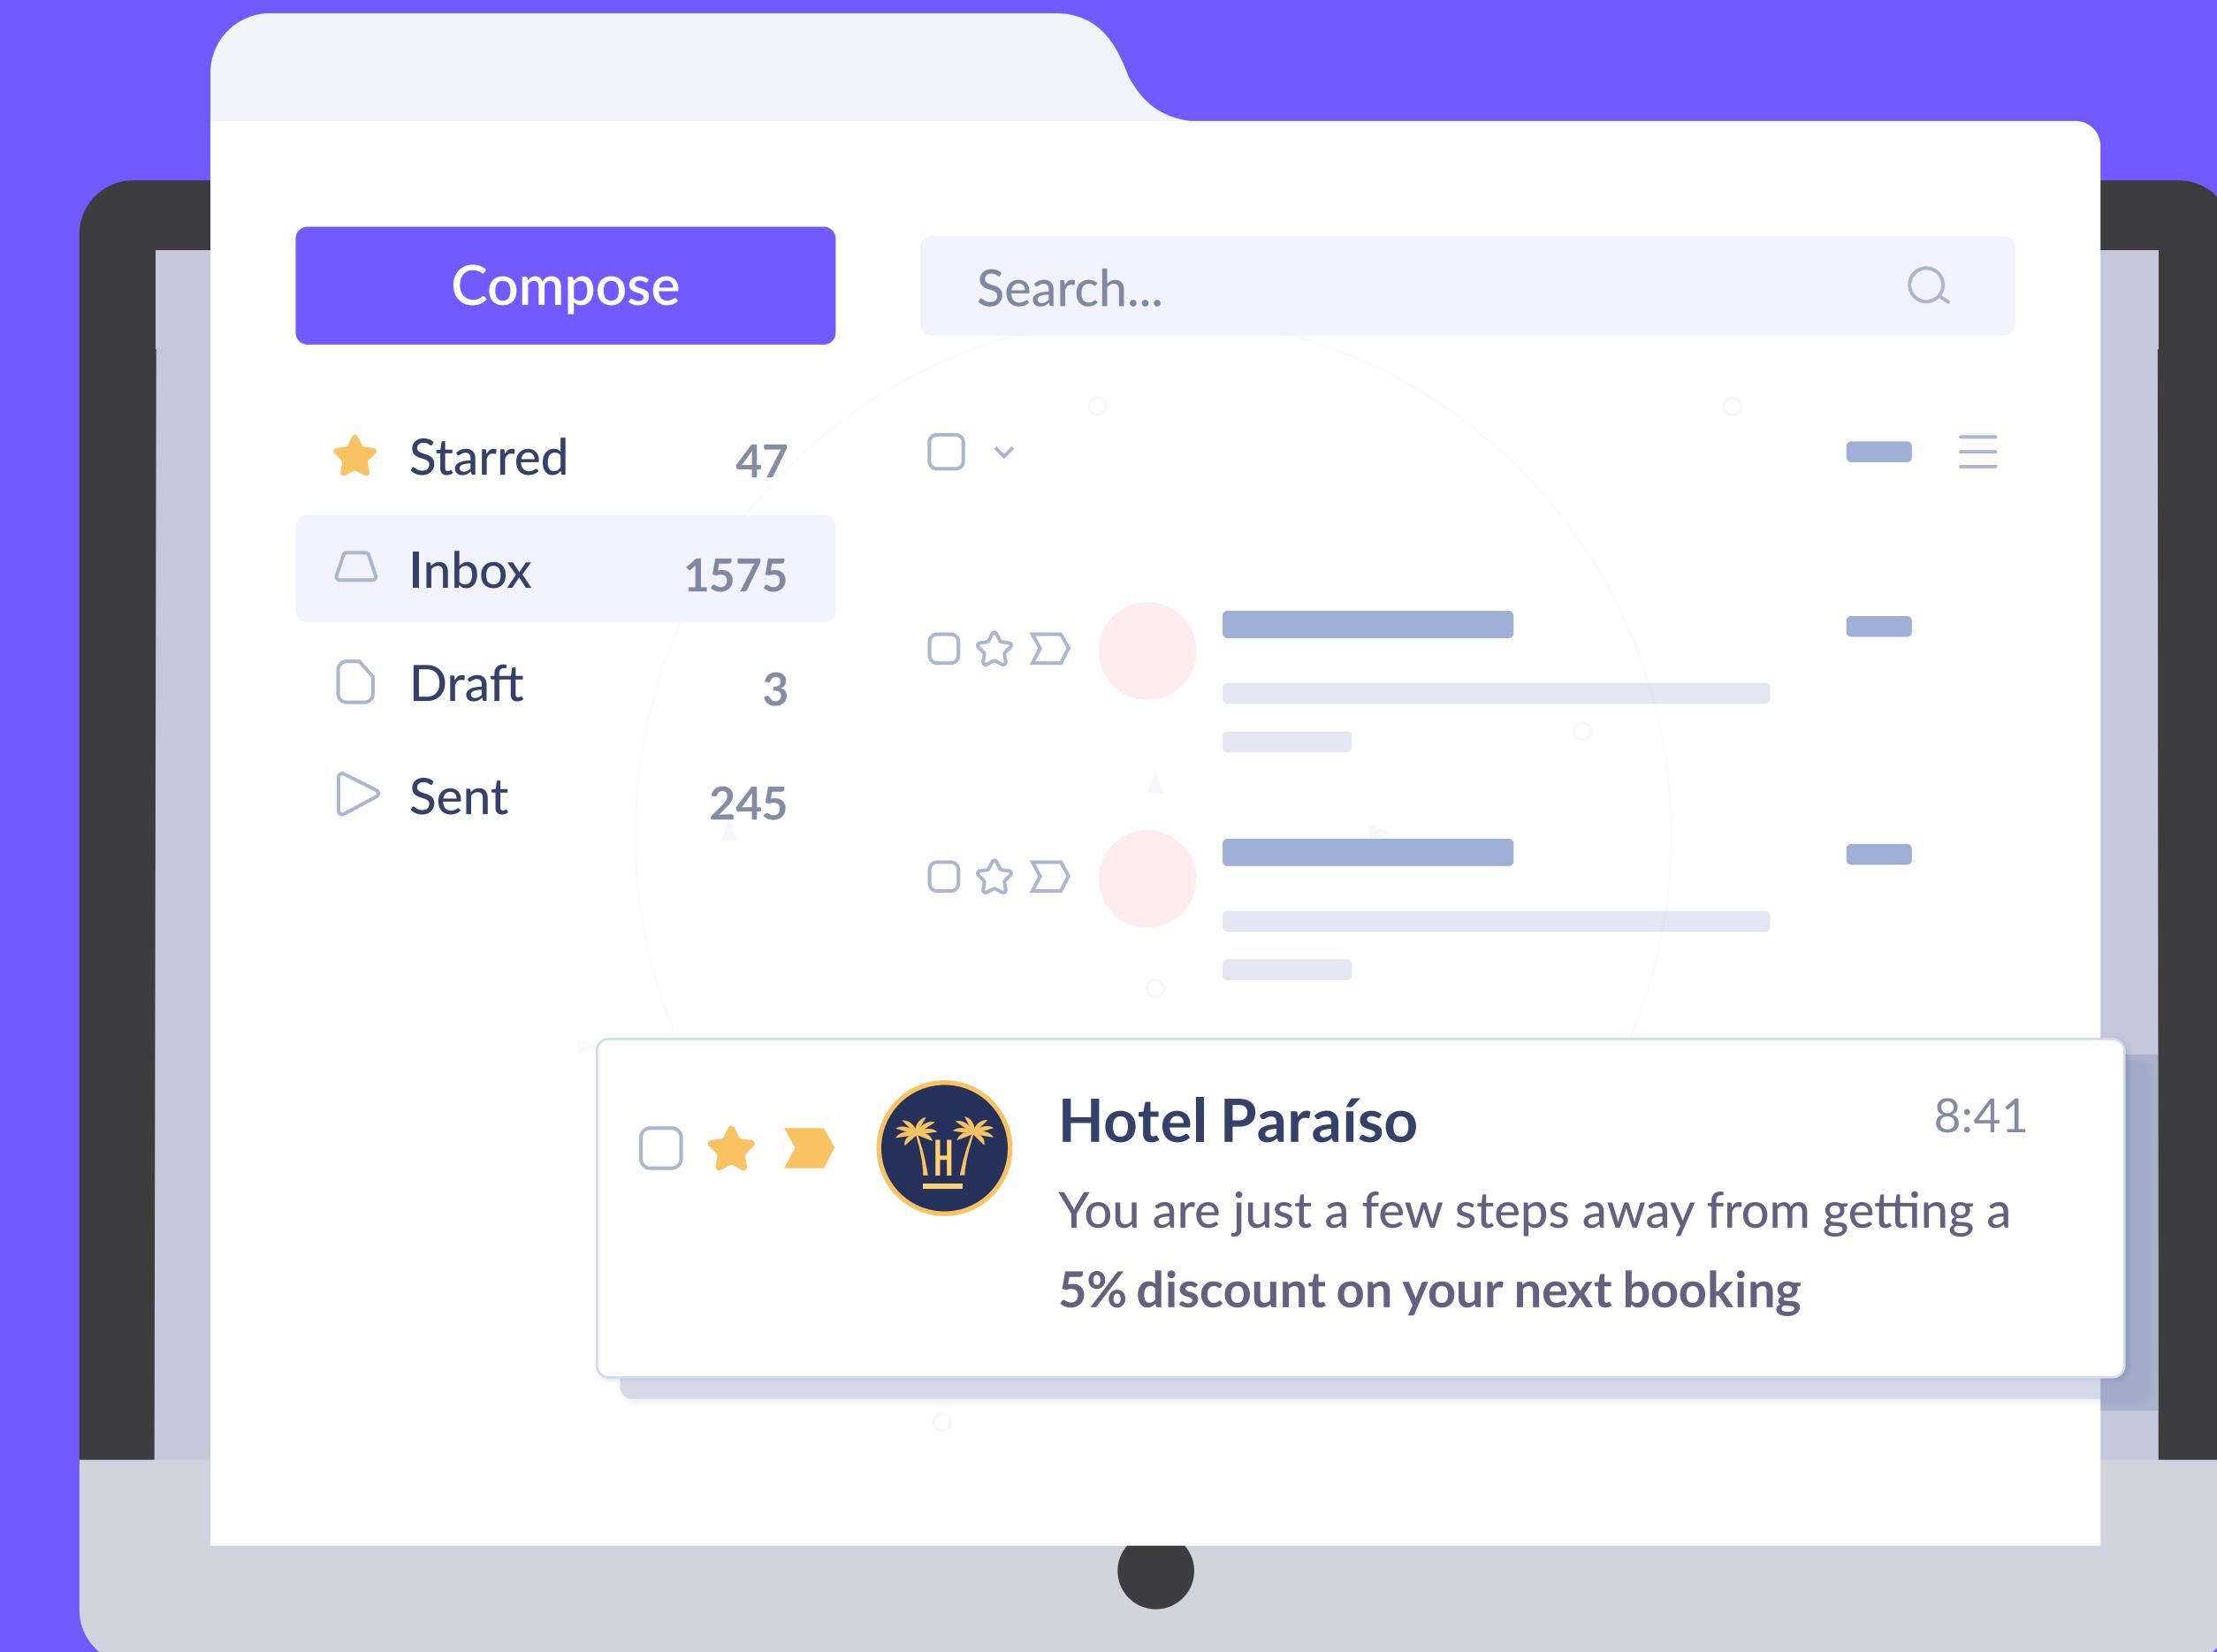

They often leave without a trace. In many more cases, they never return to make a reservation on the website because they see no advantage compared with an aggregator.

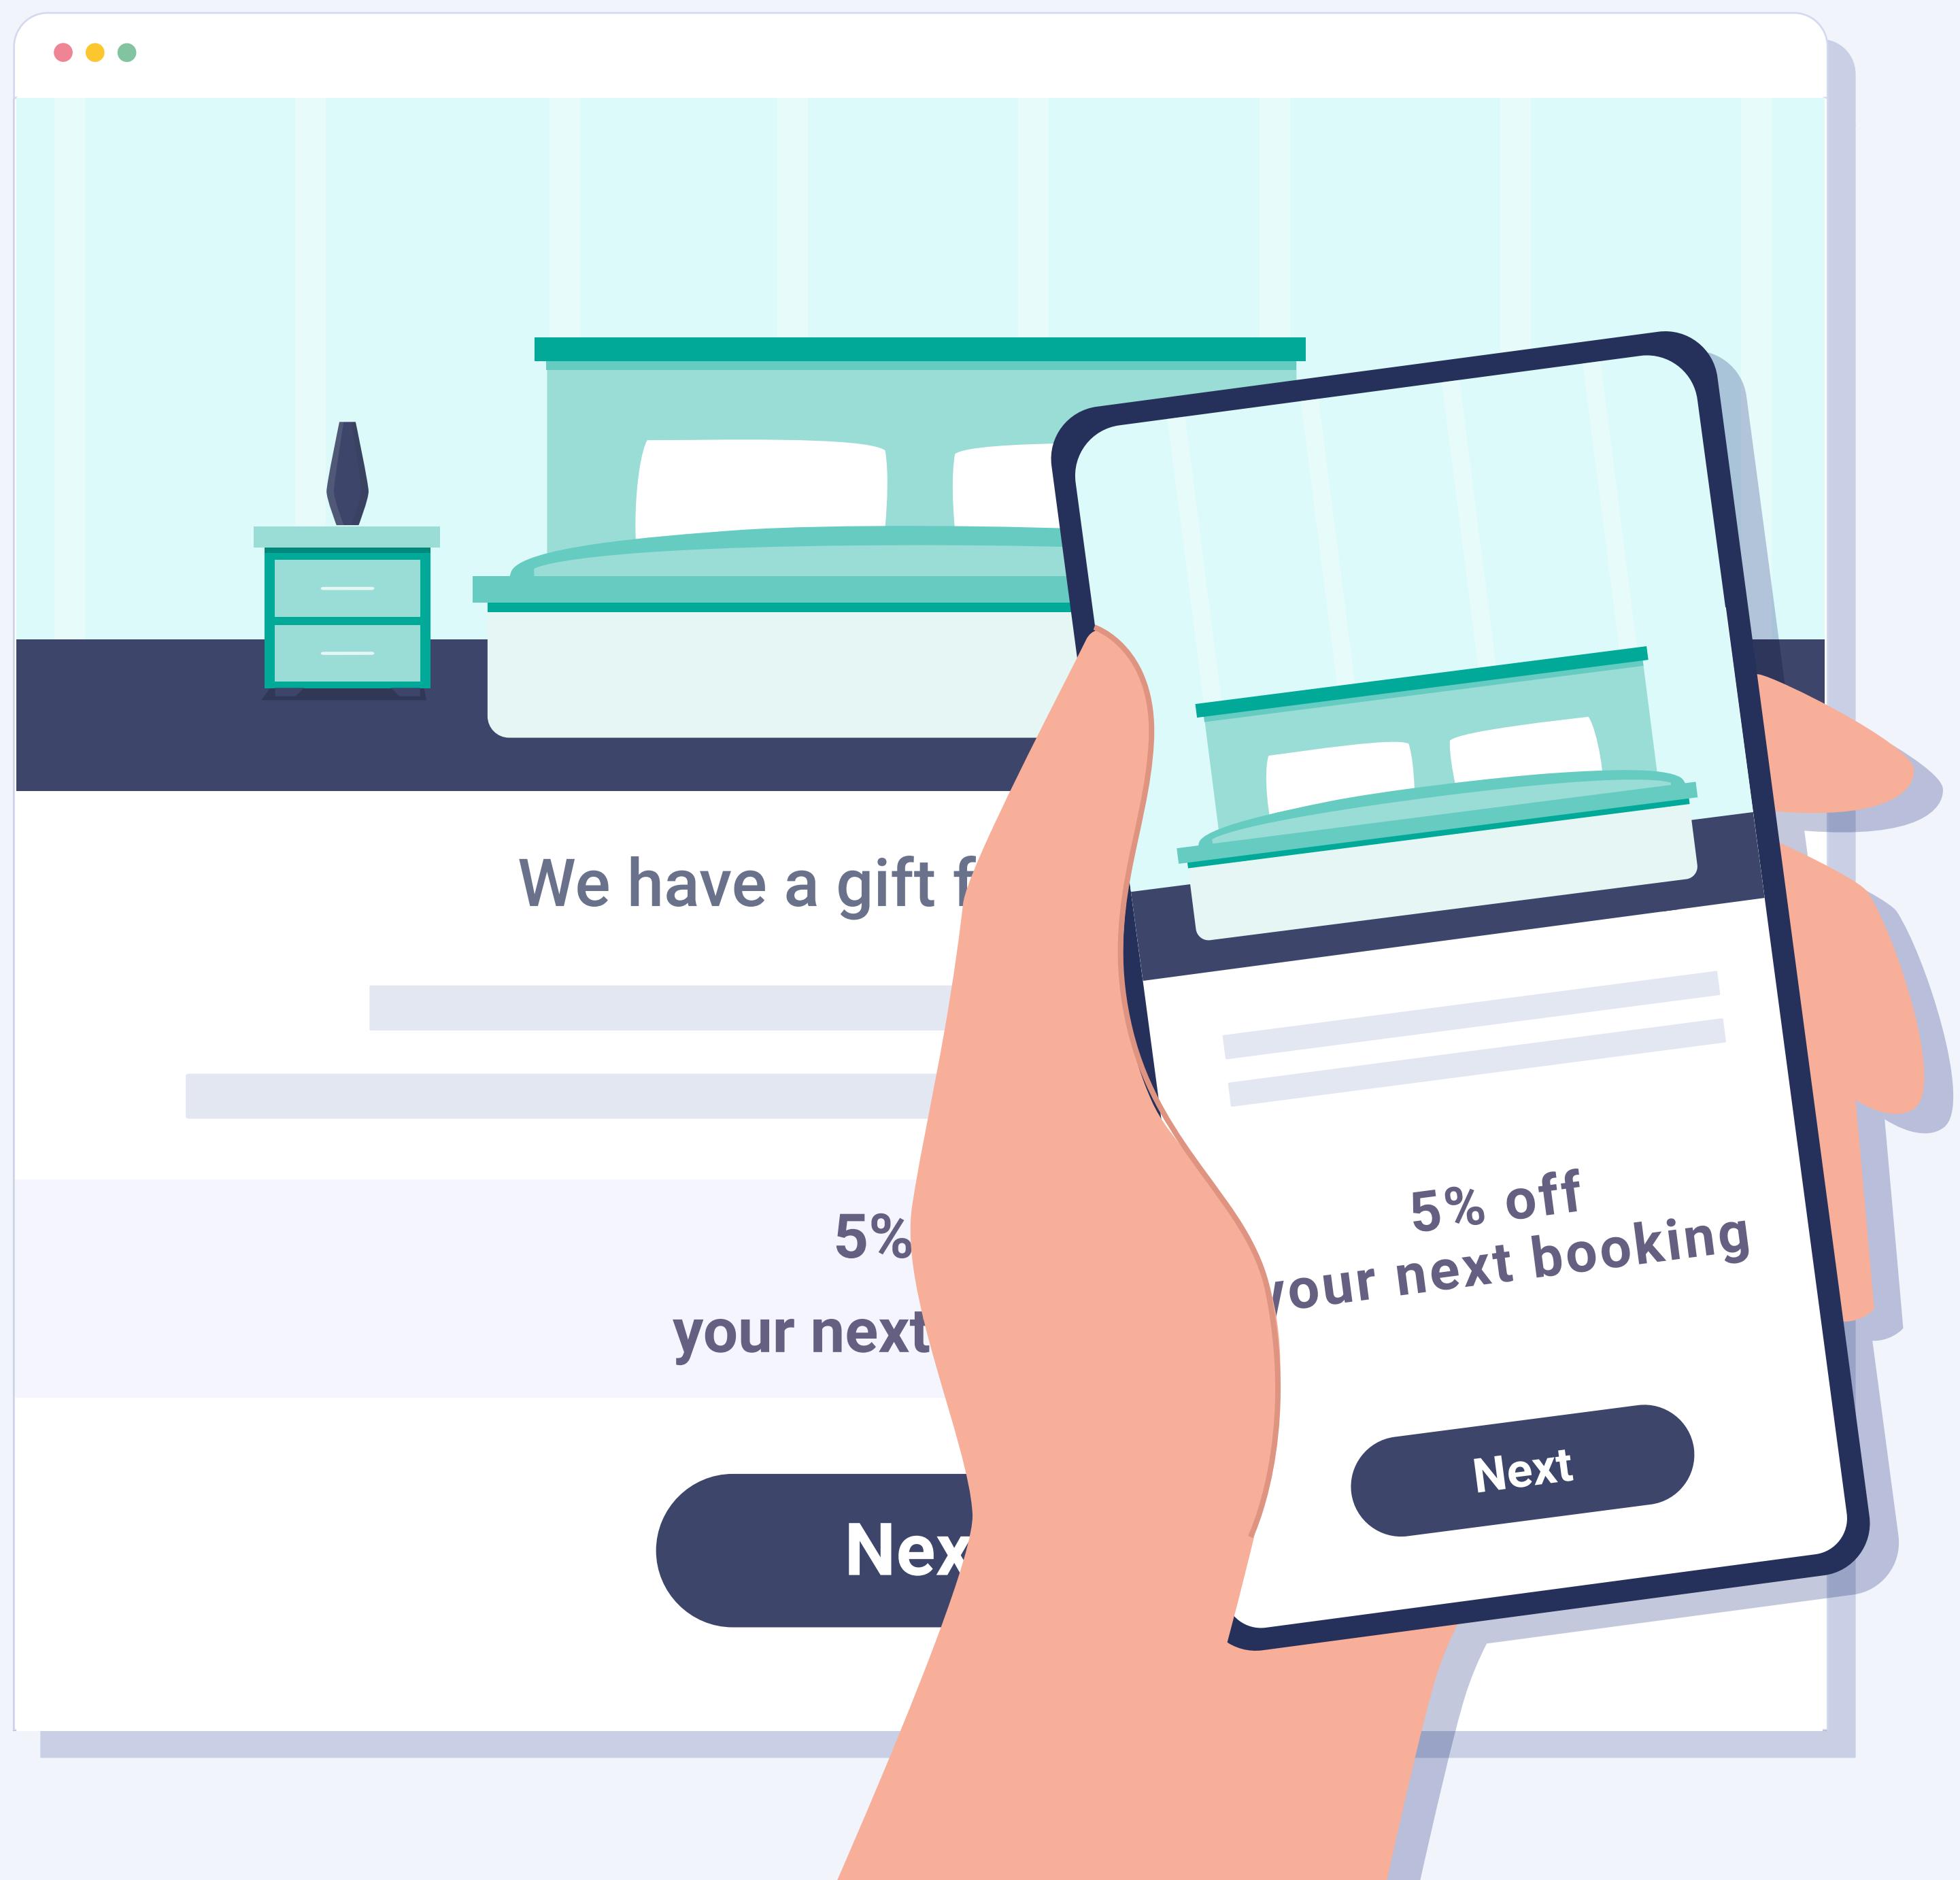

Bellbot is a widget that is specially designed to change this and **transform visits directly into bookings**.

Bellbot appears to web page visitors as a **personal assistant** and offers a series of **incentives** to make the booking via the web page.

Benefits

Benefits for the customer

- The potential hotel customer can take advantage of exclusive services and benefits without paying any more for them.
- The customer perceives added value that encourages them to make the booking now or choose this hotel for their holidays.

Benefits for the hotel

- It encourages customers to make bookings via the web page itself, **saving on commissions for intermediaries**.
- Valuable information about the customers is gathered and can be used by the hotel to create **marketing campaigns** and **finely-tuned loyalty plans**.
- It improves the brand image and increases **customer loyalty**.

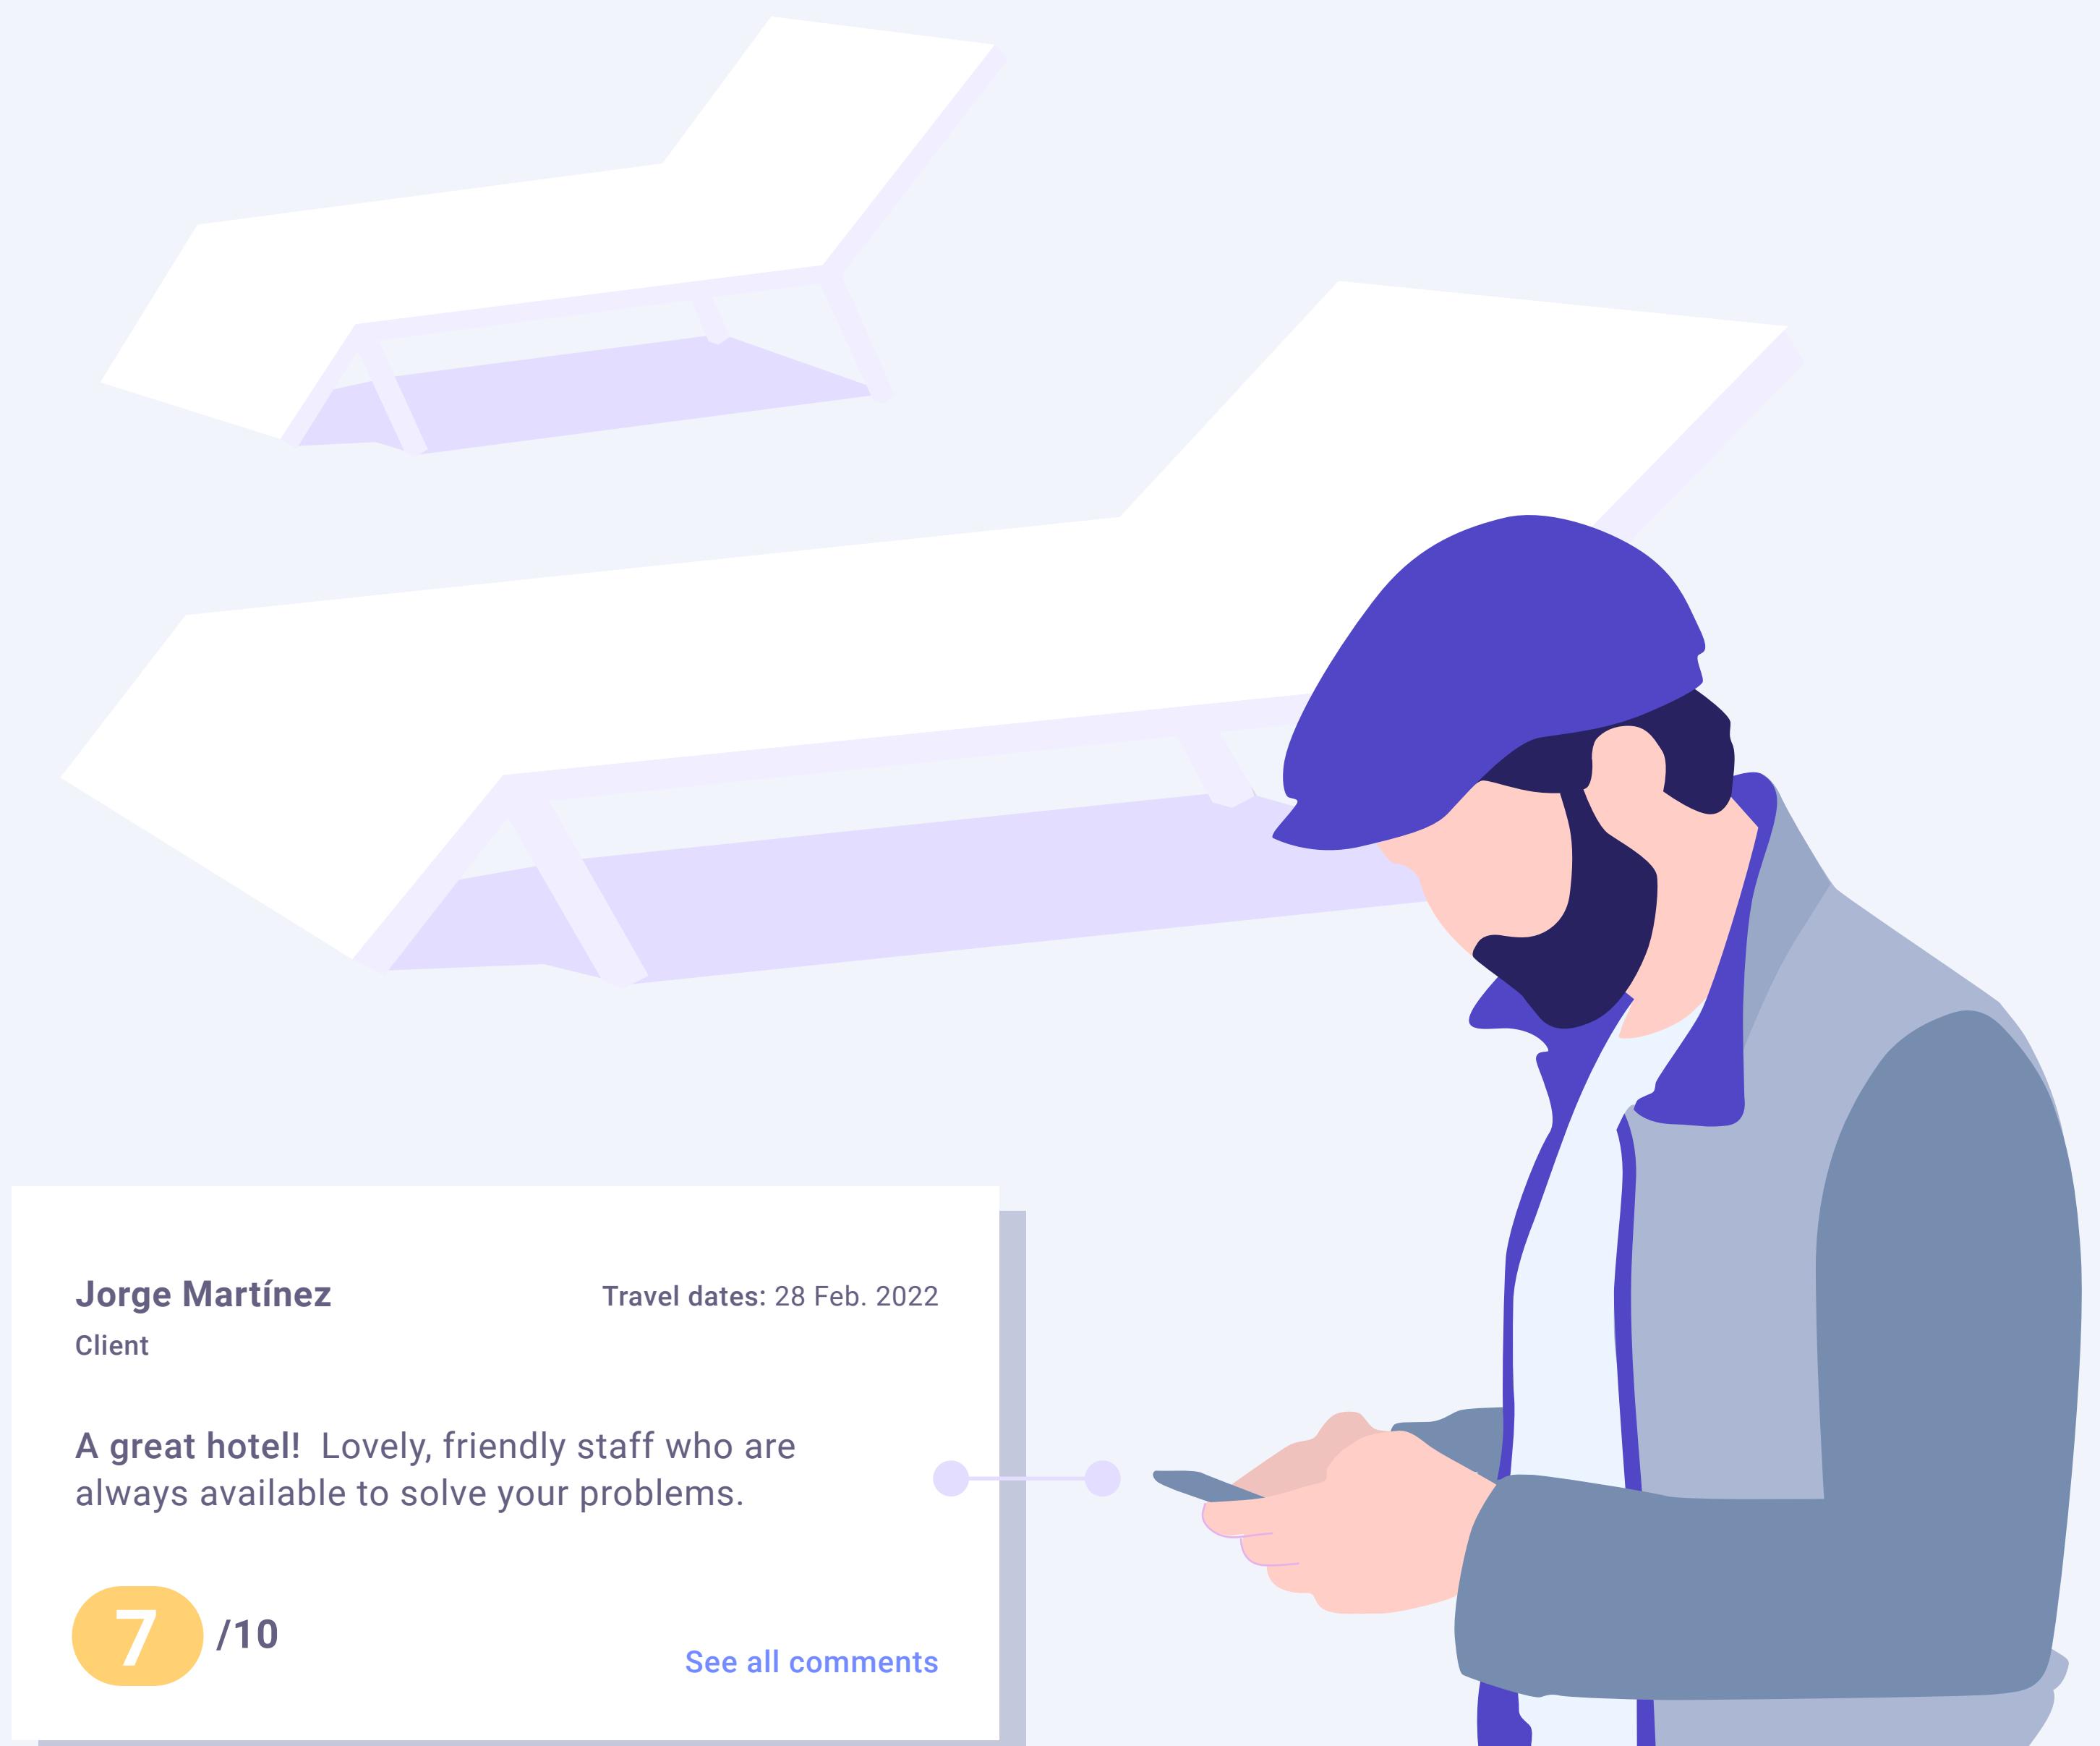

Characteristics

Legal Issues

- Details approved in real time and in compliance with the **GDPR**.
- Configurable legal documents.

Jorge Martínez
Client

Travel dates: 28 Feb. 2022

A great hotel! Lovely, friendly staff who are always available to solve your problems.

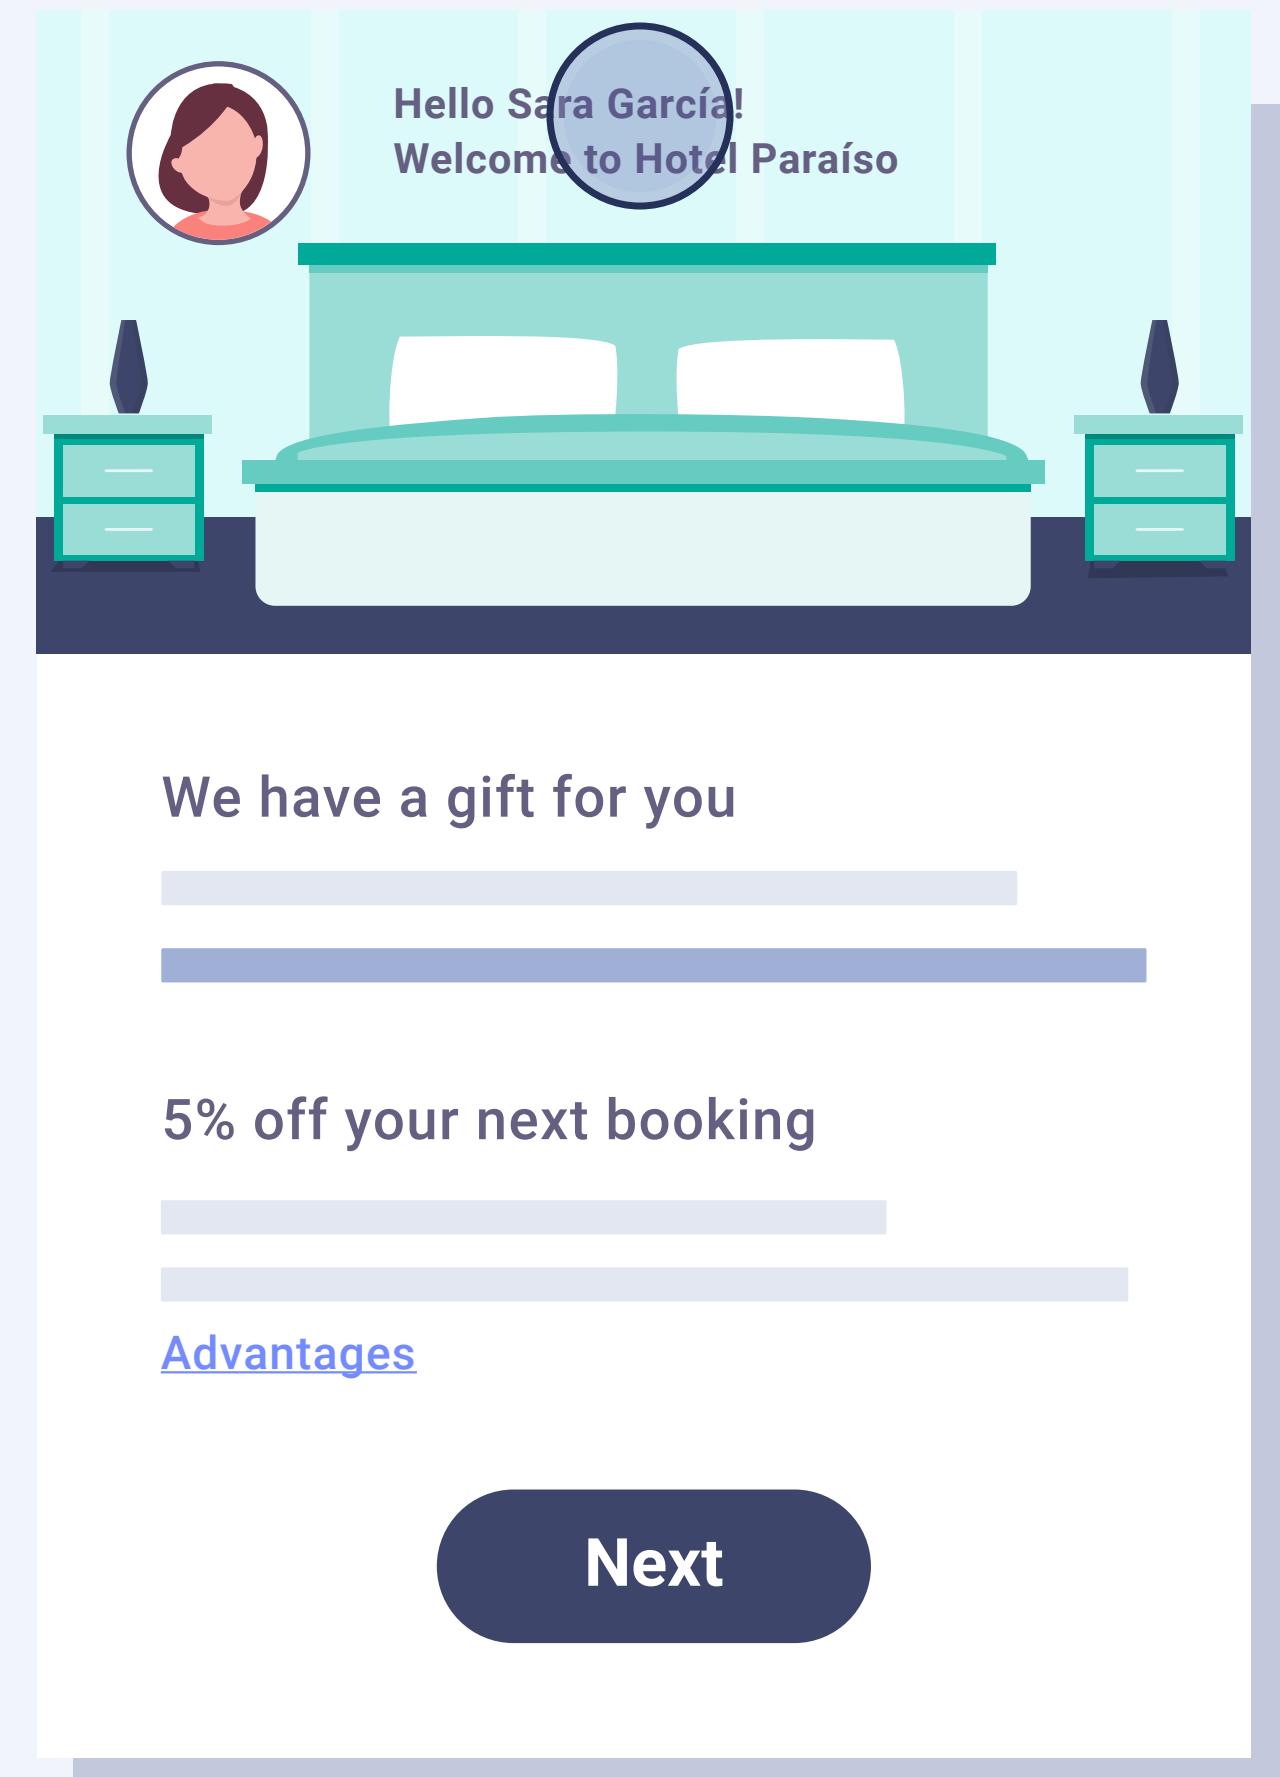

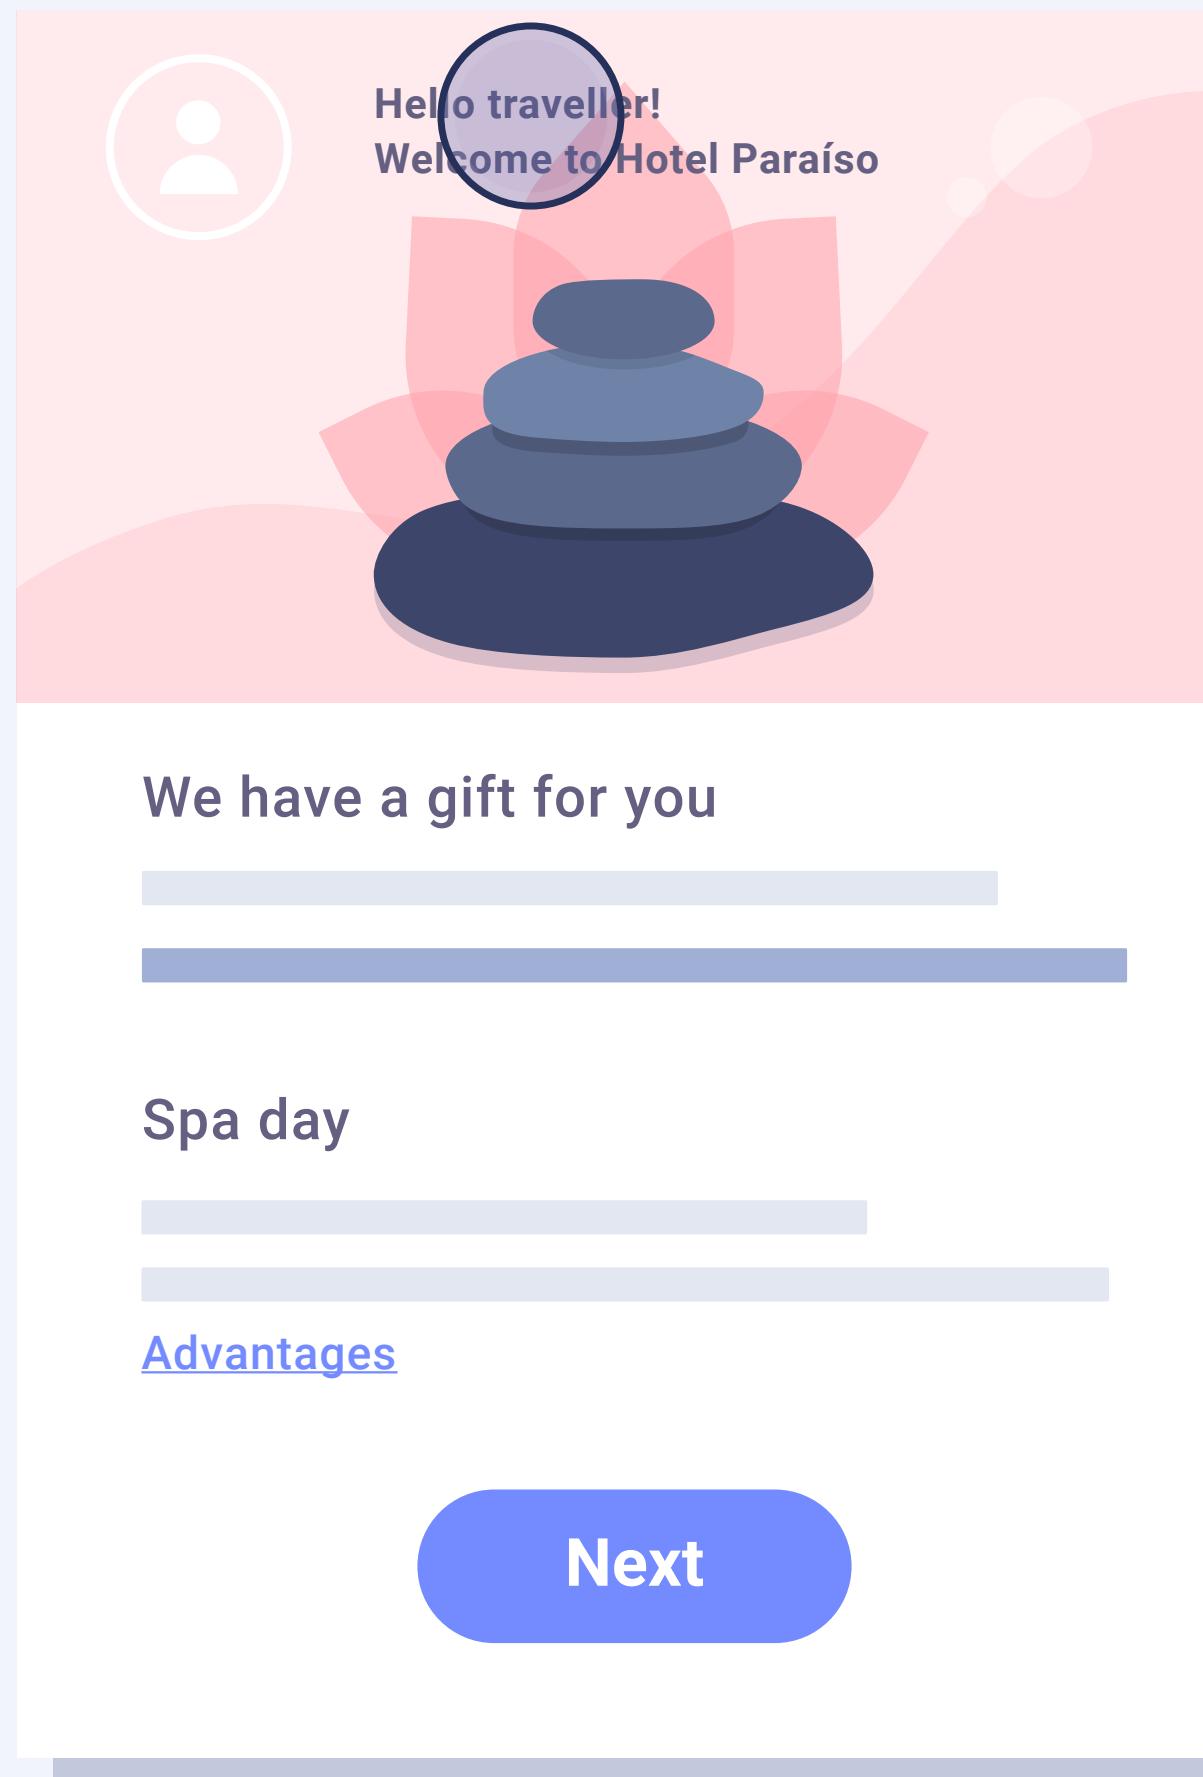

7 /10

[See all comments](#)

Guest opinions

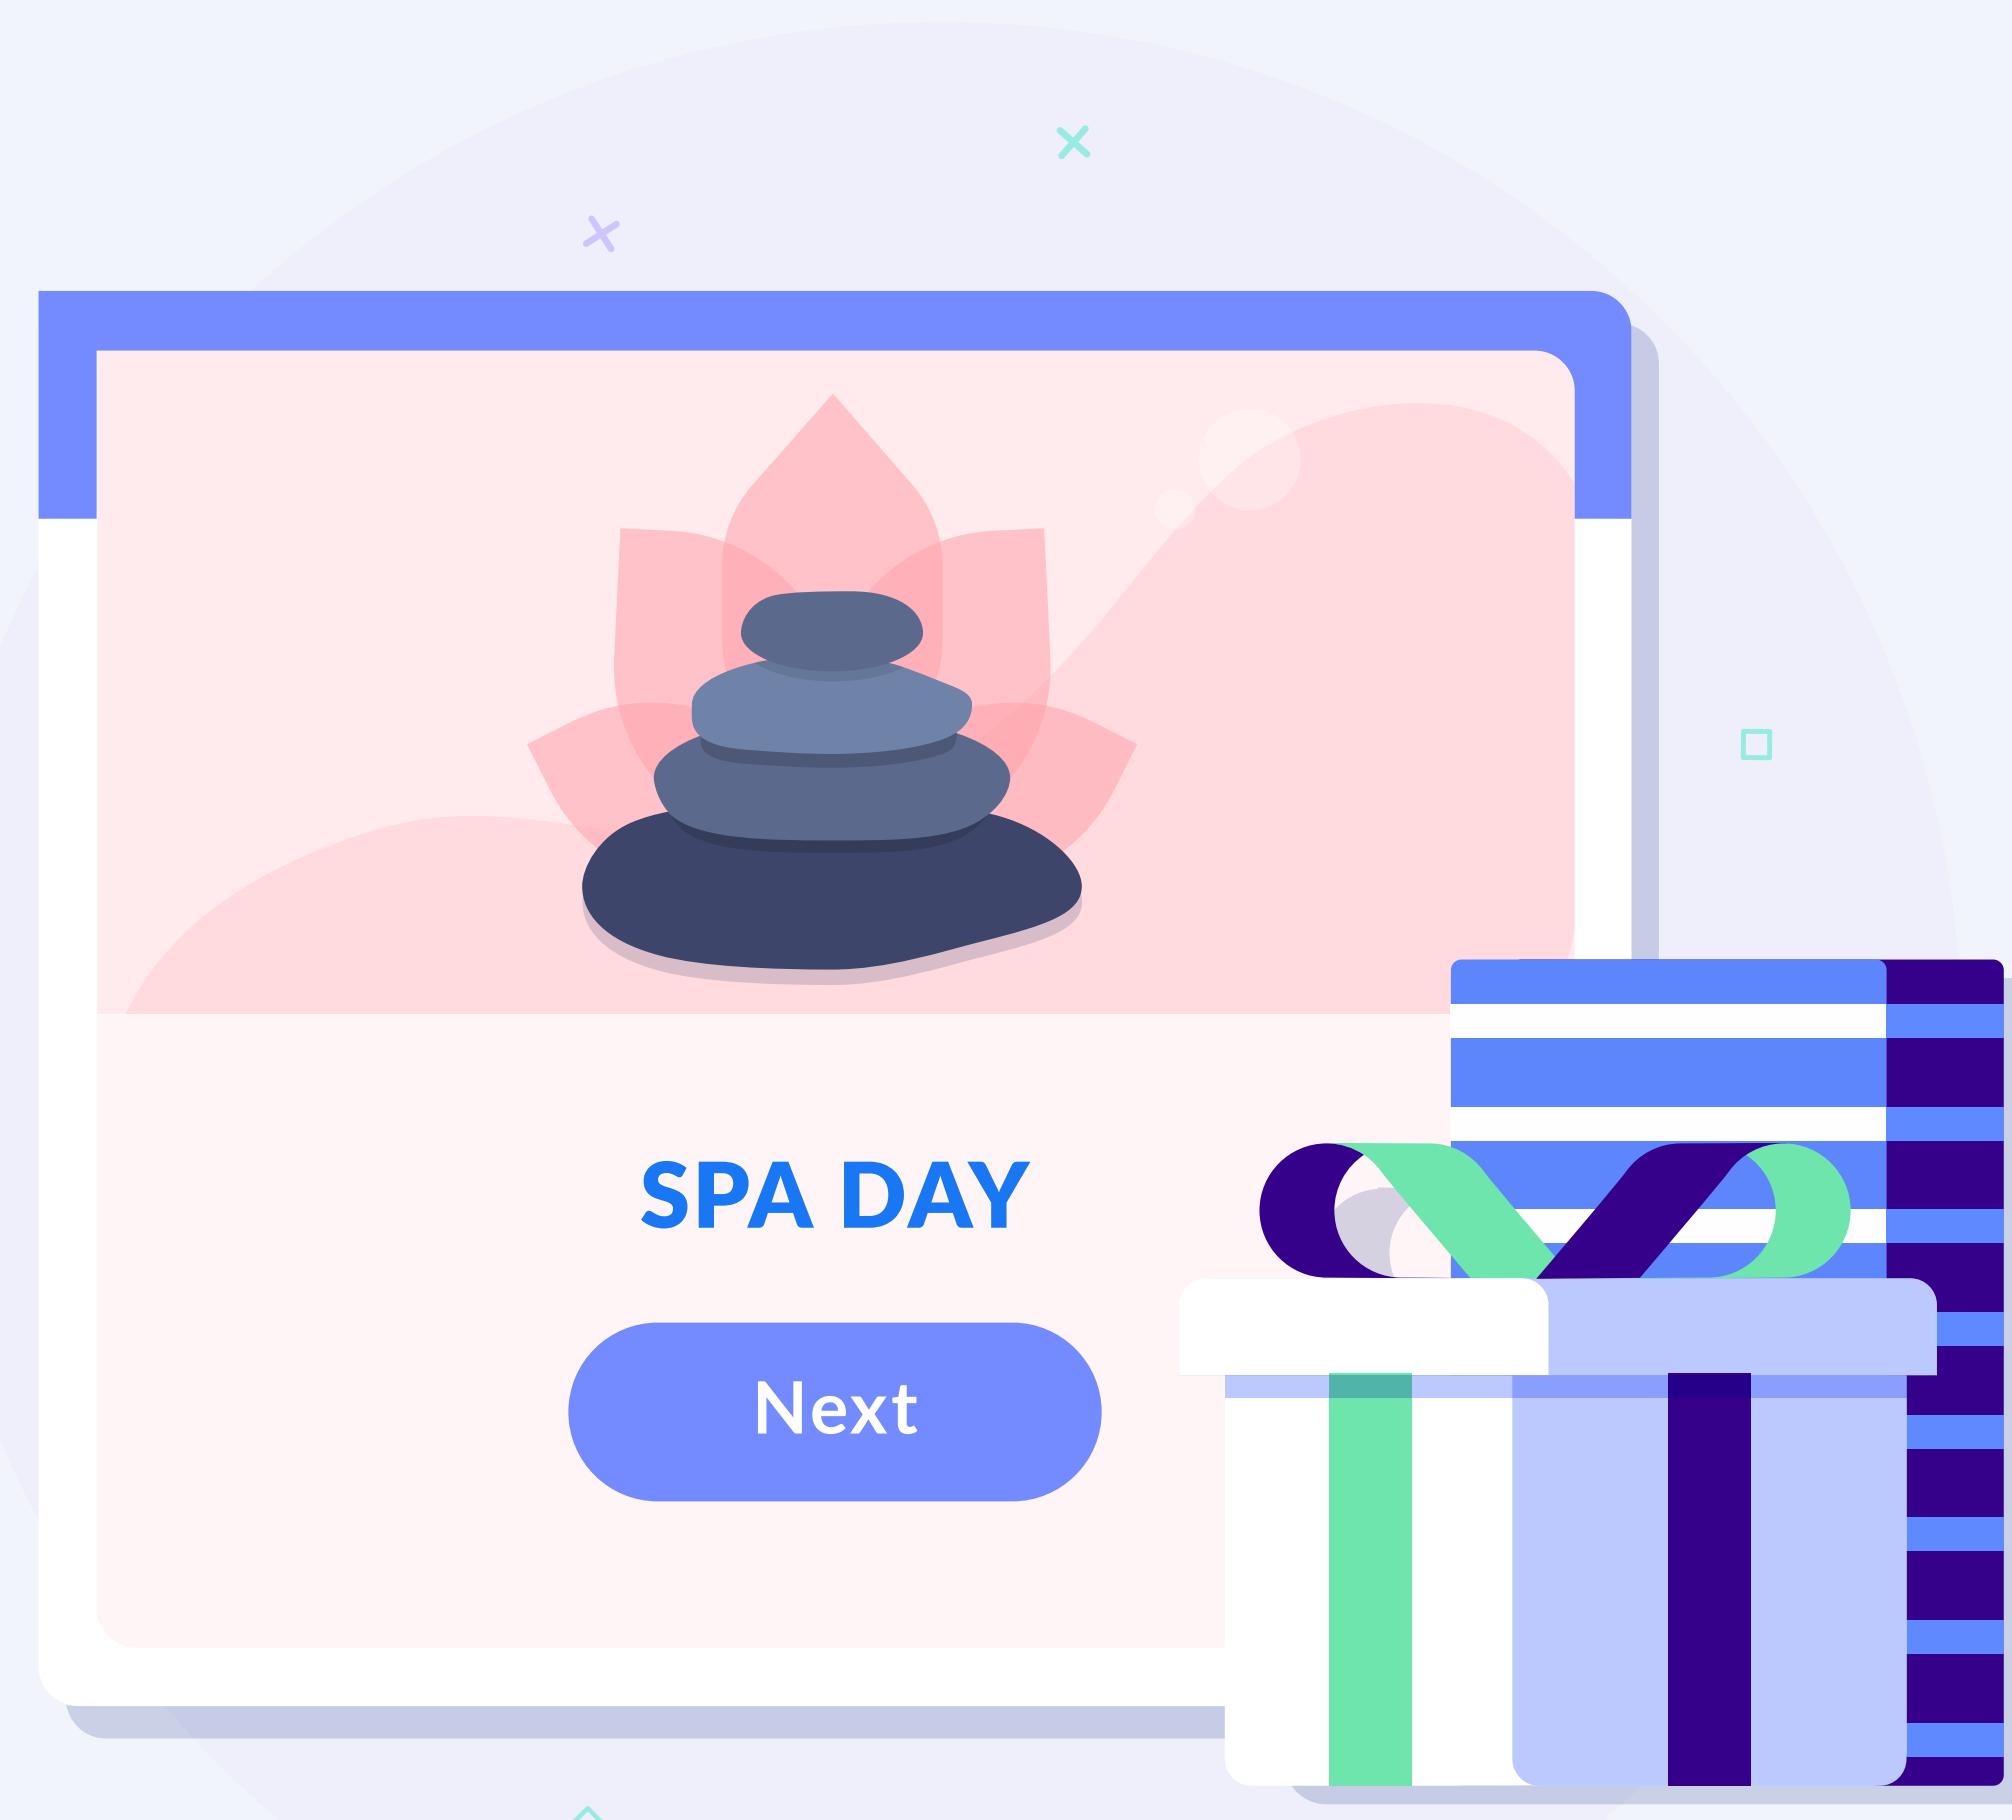

In addition to the assistant, the widget also has a function that shows the **positive comments** left by hotel guests.

This function can be configured to show the most recent opinions and the speed they are updated.

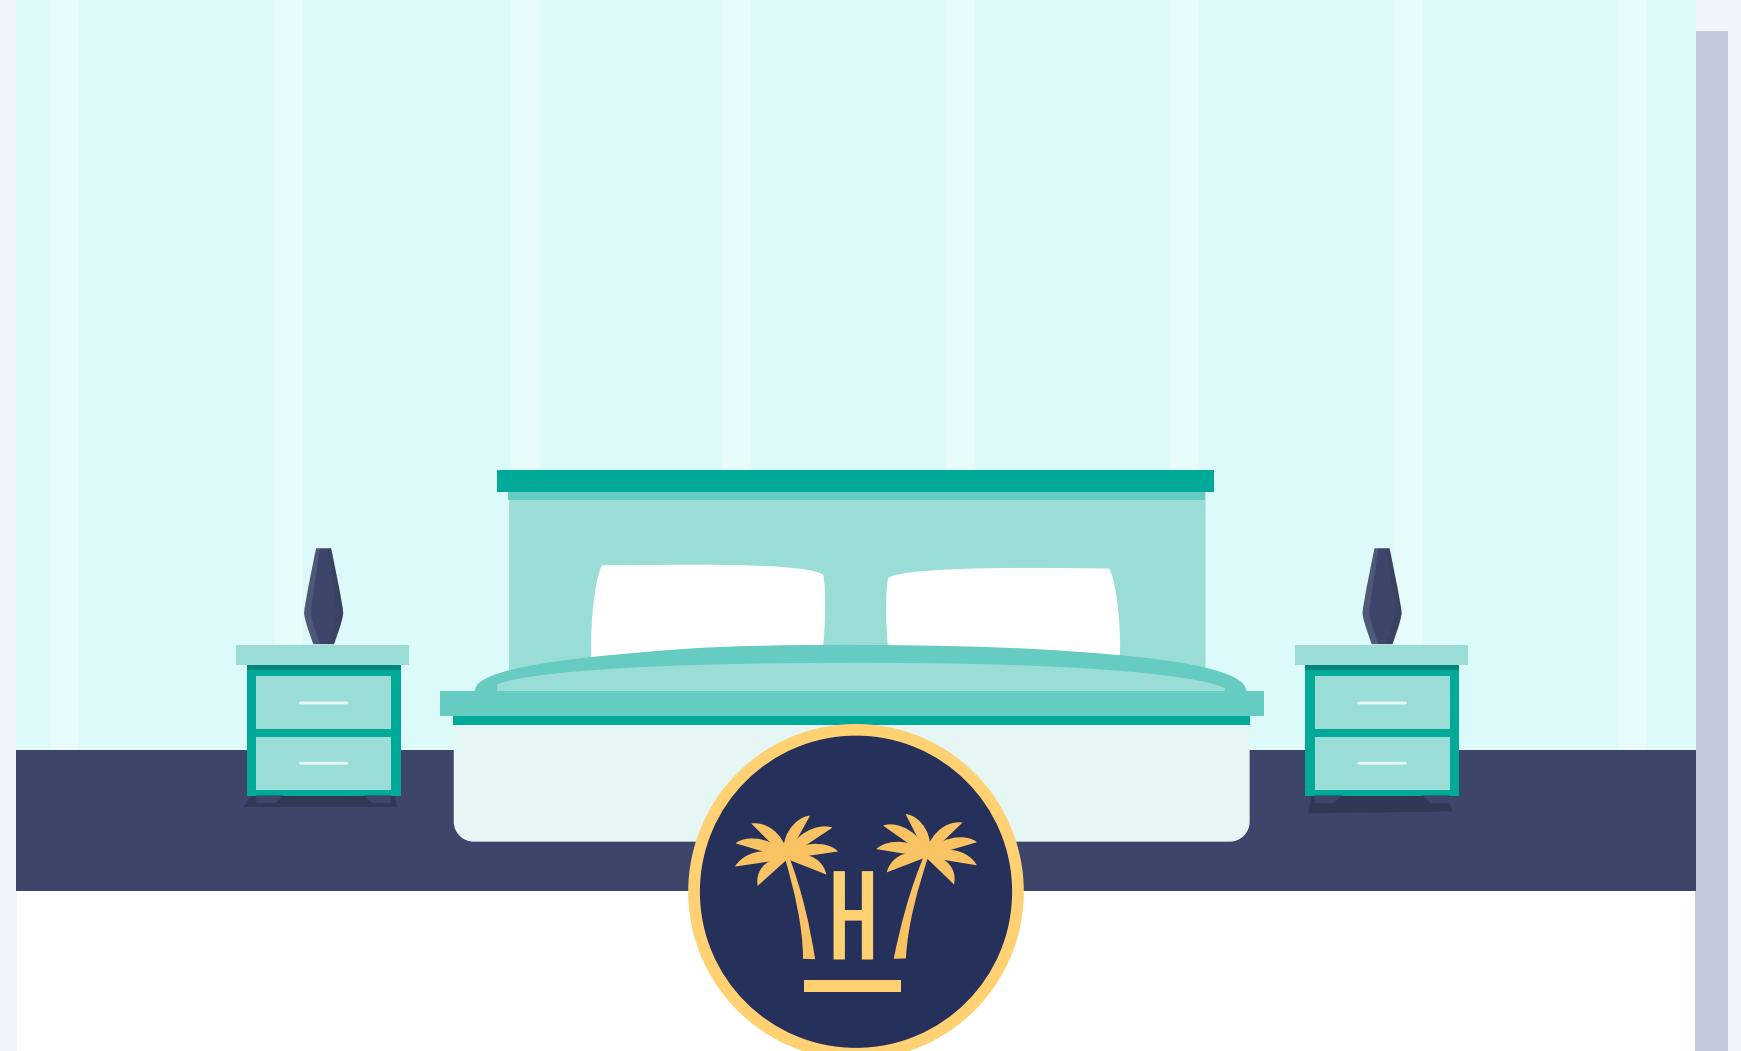

Widget personalisation

- The name and photograph of the assistant can be **personalised**, as well as the colours and the greeting.
- You can activate both functions of the widget (assistant and opinions) or just one.
- The widget is minimised and only opens if the customer clicks on it. When it is closed, it is minimised again.

Beneficios 100% configurables

- Se pueden configurar la **oferta y ventajas** teniendo en cuenta: las visitas por día que el usuario hace a la web del hotel, el número de reservas que ha realizado en la web y el número de veces que se ha alojado en el establecimiento.
- **El tipo de incentivos (oferta + ventajas) los configura el hotel y** pueden ser desde obsequios de bienvenida hasta descuentos en la reserva.

Dear Mrs García, if you complete your booking you will receive:

5% off your next booking

Bottle of cava		

Finish booking

Automated retargeting

If users register and do not use the promo code, they can be sent an **email to remind** them of this advantage and the expiry date.

Similarly, users who do not complete the registration using the form can be sent an email to encourage them to complete their details and make the booking.

- The hotel can configure when they wish to use this reminder, such as when it sends the email after the visit to the web. These reminders can be configured in the '**Notification configuration**' section on the widget panel.
- The notification for users with partially completed form alerts users that have not completed the registration and encourages them to complete it and make the booking using the promo code.

Operation

The widget appears minimised by default but expands when the user clicks on it to show the assistant and positive comments about the hotel.

It is the hotel itself that decides what type of comment should appear, even suggesting specific comments made by a user.

The image shows a hotel booking website with a Bellbot widget overlay. The main background features a large illustration of a hotel building on a island with palm trees and a red roof. Below the hotel is a search bar with 'Search' and a magnifying glass icon, and buttons for 'Check in' and 'Check out'. To the left is a small image of a bedroom. On the right side of the page, there's a section for average scores and a promotional code.

Bellbot widget content:

- Average score of our clients: 7.5
- Offer: 5% off in your next booking
- Advantages:
 - ✓ Early check-in.
 - ✓ Free golf fee.
 - ✓ Late check-out.
 - ✓ Bottle of cava
- Booking button: BOOKING22
- Text: Click the button to copy the promotional code and use it during booking process.

Immediately after the welcome, the assistant shows users the **offers** and **benefits** they can get by booking through the website.

Great! To collect your gift, I need some details, and my main objective is to protect your data.

Accept [Terms and conditions](#)

Accept

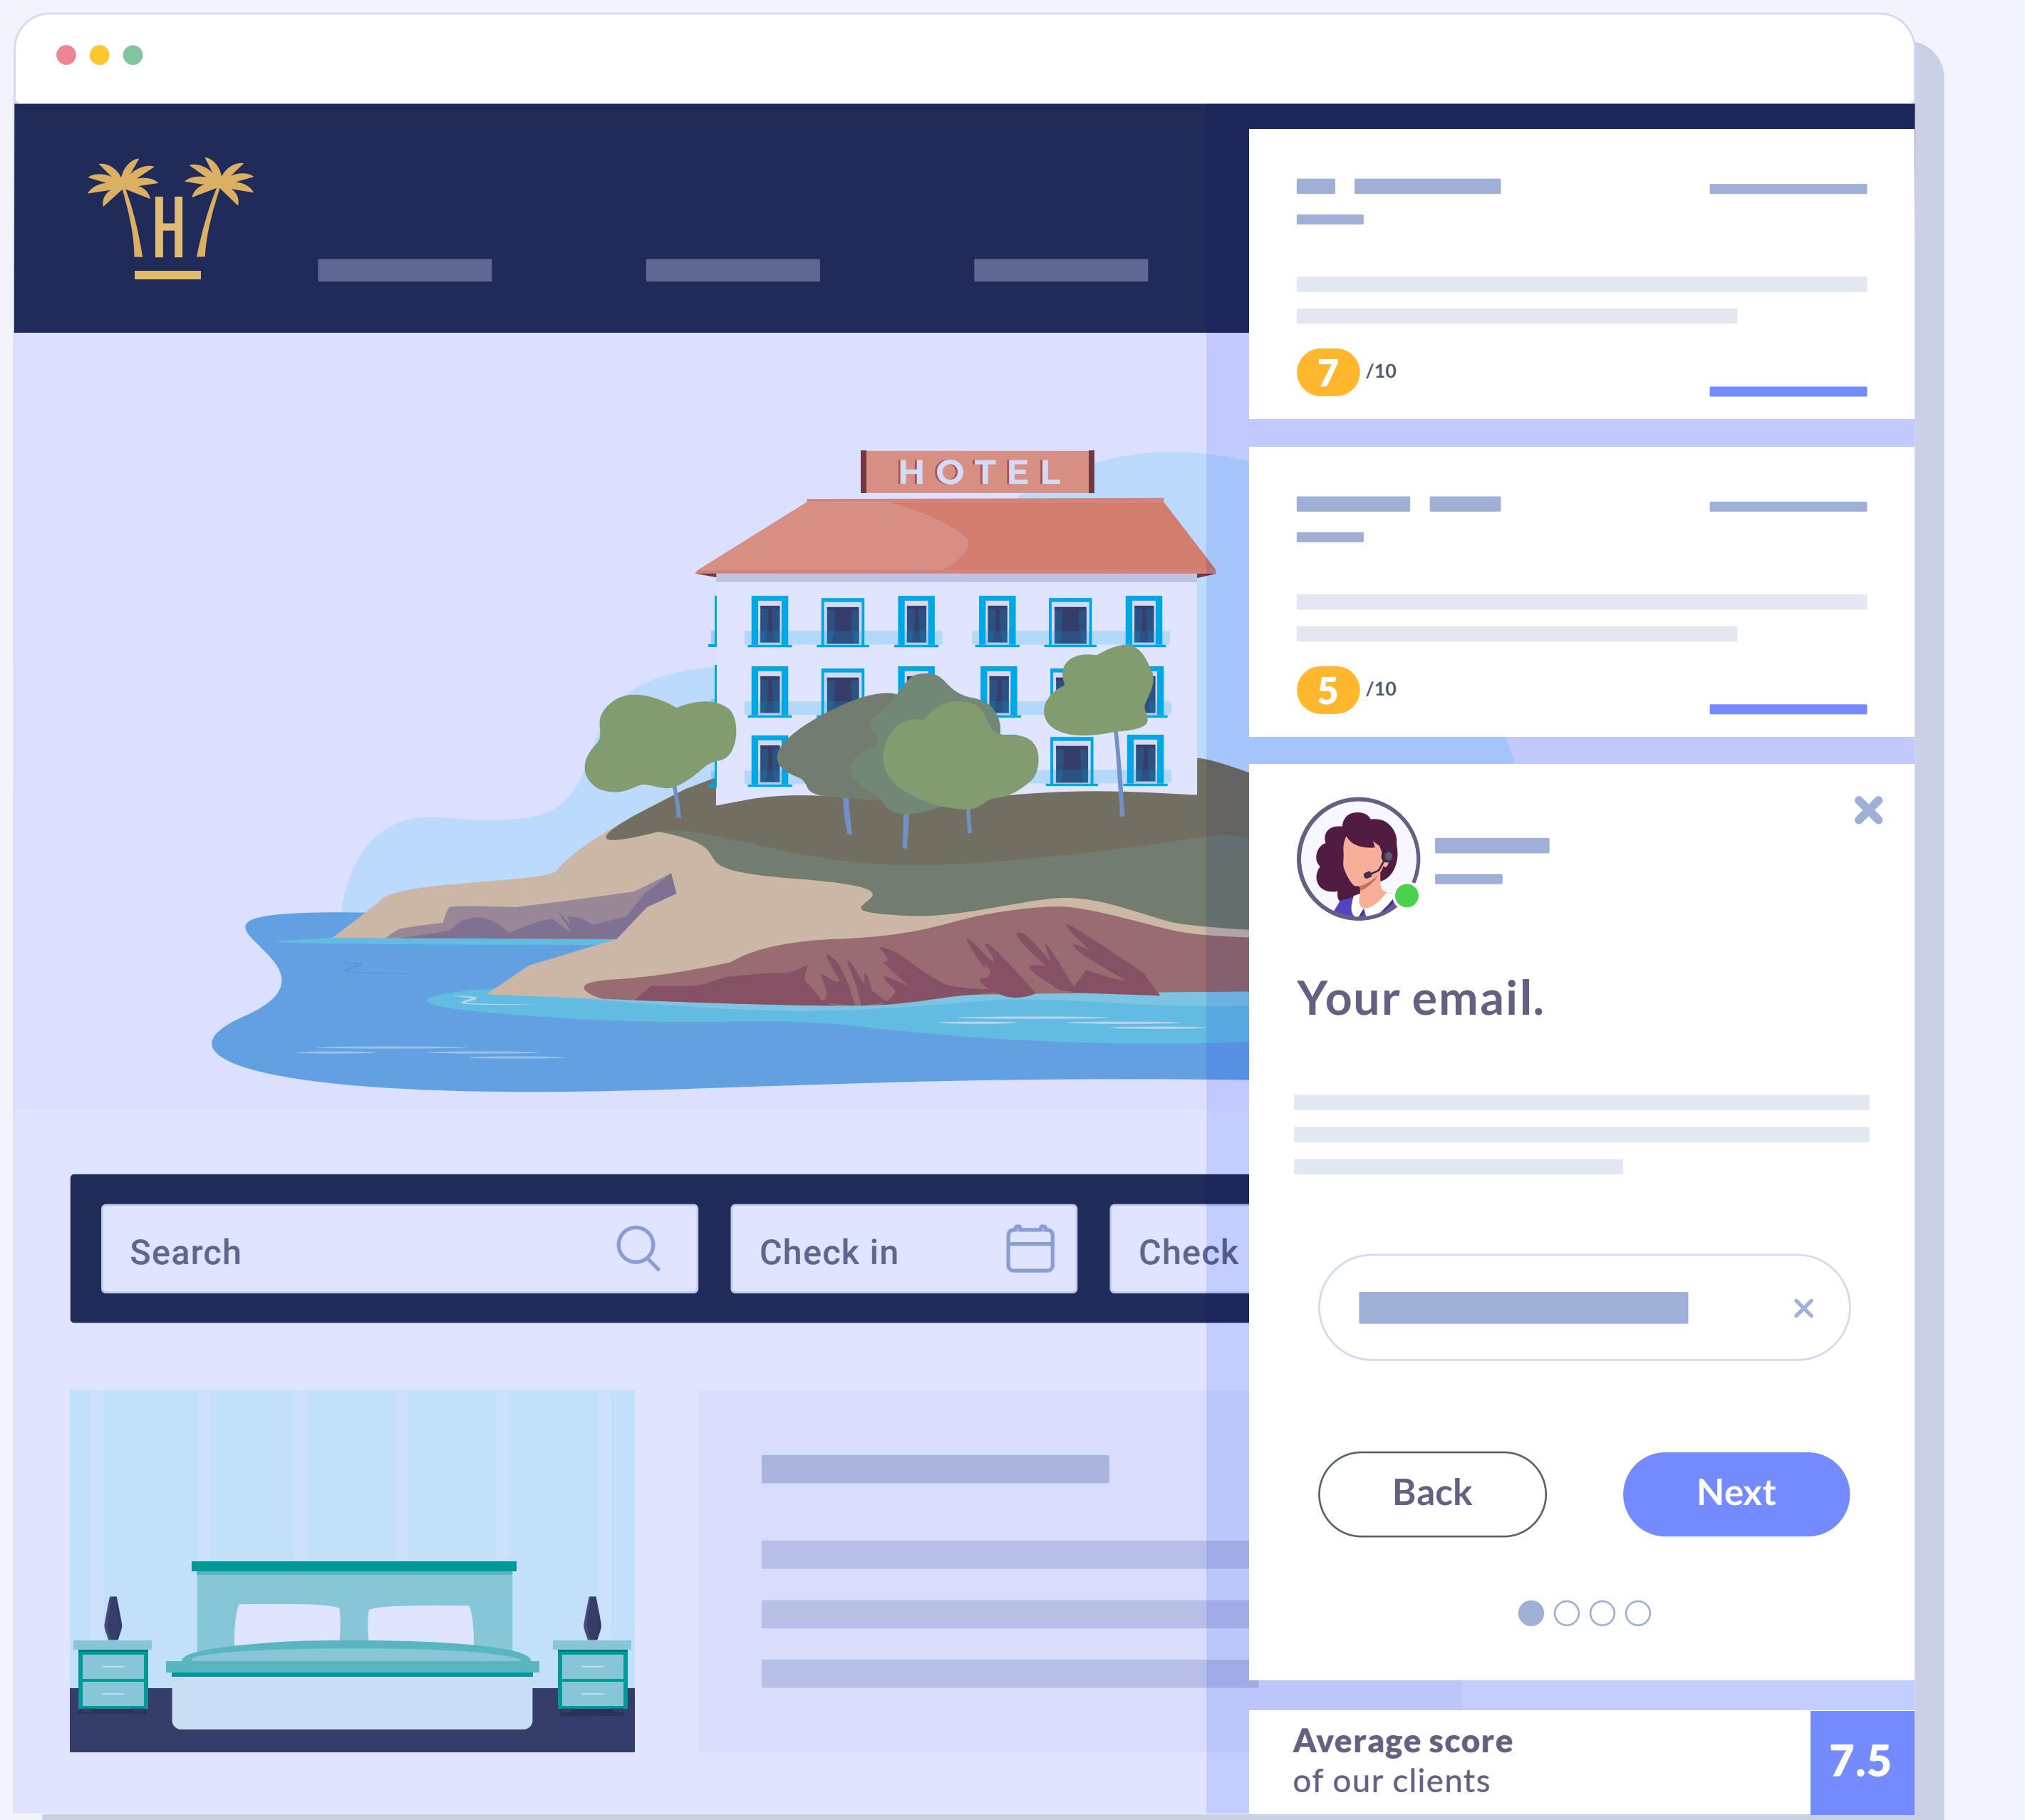

Average score of our clients **7.5**

To collect these incentives, the visitor has to enter the details required by the widget.

They must accept the terms and conditions beforehand.

What details does it request from the visitor?

To begin, the first detail requested is identification via the form.

Via the form

The information required is their email, name, surname, date of birth and gender.

Step 1: Enter email address.

The screenshot displays a hotel booking interface with a Bellbot chatbot integrated into it. The main background features a hotel building on a small island with palm trees, a search bar with a magnifying glass icon, and a check-in/check-out date selector. In the foreground, a Bellbot overlay is active, prompting the user to enter their name and surname. The overlay includes a progress bar (7/10 and 5/10), a user icon, and navigation buttons for 'Back' and 'Next'. The footer of the overlay shows an average score of 7.5 based on client reviews.

Step 2: Enter name and surname(s).

Your name.

Average score of our clients 7.5

The image shows a hotel booking interface with a Bellbot widget overlay. The main interface features a hotel building on a island, search and check-in/check-out buttons, and a room view. The Bellbot widget is titled "Birth date." and includes a user icon, a progress bar (5/10), and a date selection section for Day, Month, and Year. It also has "Back" and "Next" buttons and a footer showing an average score of 7.5.

Step 3: Enter date of birth.

The image shows a hotel booking website with a Bellbot widget integrated into the right sidebar. The main content includes a search bar, a room view, and a sidebar with average scores and a booking offer.

Bellbot widget features:

- Average score:** 7.5 / 10 (with a 7 icon)
- Exclusive Offer:** 5% descuento en tu próxima reserva (Exclusive discount on your next reservation)
- Advantages:**
 - ✓ Early check-in.
 - ✓ Free golf fee.
 - ✓ Late check-out.
 - ✓ Bottle of cava.
- Booking button:** BOOKING22 (with a copy icon)
- Text below booking button:** Click the button to copy the promotional code and use it during booking process.
- Customer support icon:** A person wearing a headset.

Finally, the widget will show the promotional code for the offer to exchange when booking, as well as a series of **benefits** that can only be obtained by booking through the website.

[Añadir oferta](#)

You can also configure the offer to match the user's behaviour. Specifically:

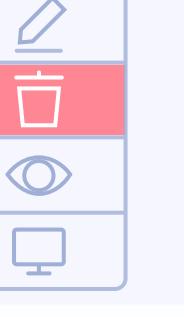

Web visits: take the number of visits that the user has made so far into account. If they make several on the same day, they will count as one visit.

Hotel visits: consider the visits to the hotel or chain that the user has made. This information is available because the data entered in the widget form by the user is compared against the records kept by the hotel.

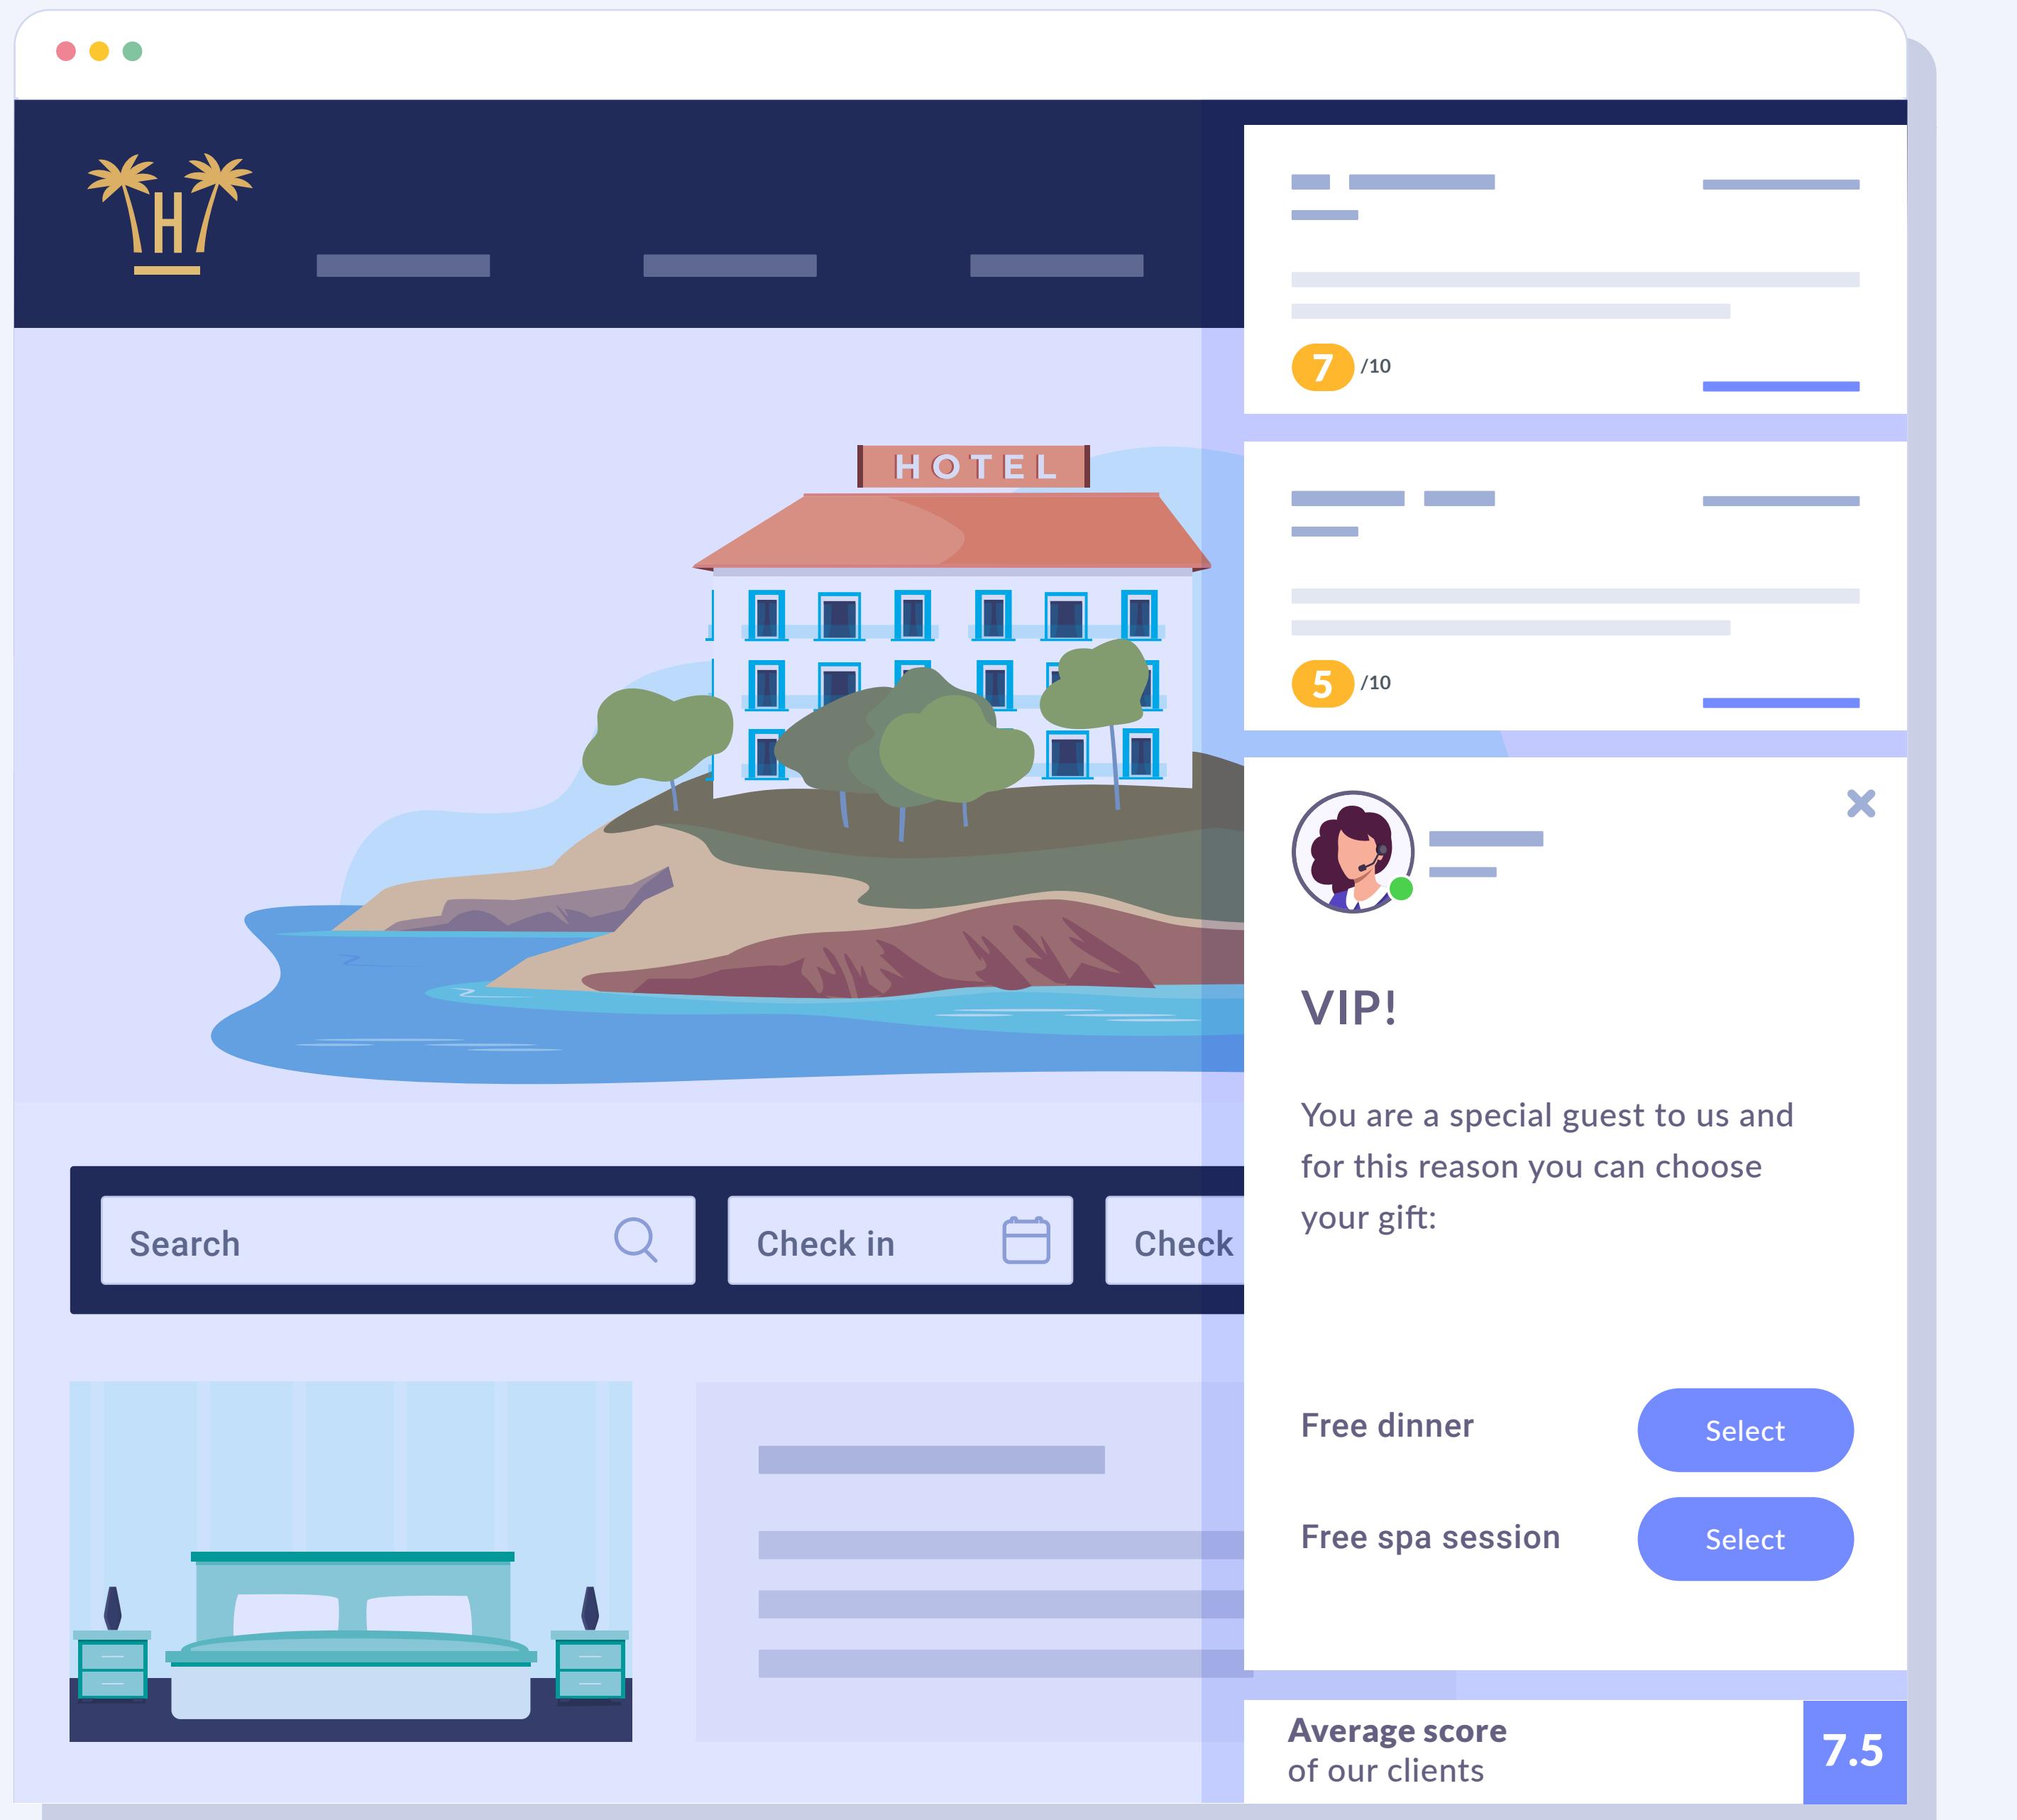

Campaigns

Chain rewards

Id	Created	Name	Acquired	Redeemed	From	Status	Action

51	11.03.22	Welcome desserts	0	0	15.03.22	Active edition	

Offers that appear on the pull-down menu are defined in the '**Prizes**' section of the Hotelinking general panel.

As we have seen, we can configure different options according to the number of times a user visits the web.

In this case, the user can select on the widget the offer that prefers from all those offered previously in each visit and obtain the promotion code, at the end of the registration.

In the event that the user leaves the website after the registration, the widget will be able to recognize him when he returns, addressing him by his name and offering the advantages that he had previously selected.

Hide the promotional codes: if you prefer to hide the code in the widget, instead of the copy button, the system will display the option to apply it directly to the booking.

The screenshot shows a hotel booking website. At the top, there's a dark header with a logo of two palm trees and a stylized letter 'H'. Below the header is a large, semi-transparent overlay image of a white multi-story hotel building with a red roof, situated on a green hillside overlooking a blue body of water. In the bottom right corner of this overlay, a white rectangular promotional box is displayed. The box contains a small circular profile picture of a woman wearing a headset, followed by the text "EXCLUSIVE OFFER" and "5% off in your next booking". Underneath, a list of advantages is shown with checkmarks: "✓ Early check-in.", "✓ Free golf fee.", "✓ Late check-out.", and "✓ Bottle of cava.". A blue button labeled "Activate offer" is centered below the list. Below the button, a note says "Click the button to copy the promotional code and use it during booking process." At the very bottom of the page, there's a light blue footer bar showing a double bed in a room, a list of five items, and a rating section with the text "Average score of our clients" and a blue box containing the number "7.5".

If this option is activated, the widget will display a button with the 5 text 'activate offer'.

Bellbot has two functions: the **assistant** and the **communication of positive comments by hotel customers**.

This function can be configured to show the opinions by age, score and the speed with which they are passed, or the time spent between comments and if they have image or not.

In addition, it is possible to select if you want the comments to be displayed even if there is a smaller number of comments to be displayed simultaneously.
